## VIA ELECTRONIC TRANSMISSION

Rupert Howes  
Chief Executive Officer  
Marine Stewardship Council  
2445 M St NW, Suite 550  
Washington, D.C., 20037

Dear Mr. Howes,

Ensuring that American families have access to safe, quality food is essential to empower consumers to live healthier lives and support local American businesses. Improving transparency about what is in the foods we consume is critical if we are to Make America Healthy Again. However, such visibility is impeded due to the growing reliance on imported foods from other countries.

In 2024, the United States imported approximately \$213 billion in agriculture products.<sup>1</sup> As a result of greater imports, Americans spent over \$550 billion in food and beverage products that were imported or contained imported ingredients.<sup>2</sup> With increased consumer spending on imported food, the potential safety risks from an overreliance on foreign manufacturers grows. The Government Accountability Office (GAO) recently issued a finding that in the last year of the Biden Administration, the Food and Drug Administration (FDA) was estimated to conduct approximately 1,000 foreign inspections out of the 125,000 foreign food facilities subject to FDA inspections.<sup>3</sup>

<sup>2</sup> Quinton Baker and James Chandler Zachary, *Imports accounted for less than 20% of U.S. food and beverage spending in 2023*, U.S. Department of Agriculture (May 15, 2025), <https://www.ers.usda.gov/data-products/charts-of-note/chart-detail?chartId=112543>.

<sup>3</sup> *Food Safety: FDA Should Strengthen Inspection Efforts to Protect the U.S. Food Supply*, Government Accountability Office (Jan. 8, 2025), <https://www.gao.gov/assets/gao-25-107571.pdf>.

We have experienced a serious increase in food safety incidents as a result of imported food products, specifically with regards to imported seafood. Between August to October 2025, FDA issued eight safety alerts on imported shrimp from just a single shrimp processor due to potential Cesium-137 contamination.<sup>4</sup> Cesium-137 is a radioactive substance that can cause substantial health harms. This follows a long record of potential safety harms from imported shrimp. Indeed, last October, a vendor was fined for selling imported shrimp at the largest shrimp festival in the world, raising questions about the potential safety of shrimp consumed by families.<sup>5</sup> Shockingly, foreign shrimp stakeholders have been accused of human trafficking related to the supply chain for shrimp fishing.<sup>6</sup>

As Congress examines ways to enable consumers to access high quality food, it must also examine the role that aquaculture certification plays in supporting these efforts. Stakeholders in the food supply chain, including distributors, retailers, and restaurants rely on third-party audits and certifications to determine whether the seafood they purchase is safe and responsibly caught. However, questions have been raised around the independence of these processes. In order for these processes to work and to comply with the law, third-party audits and certifications must be based in legitimacy and take steps to prevent bad actors from abusing the system. To that end, we request answers to the following questions by June 10, 2026:

1. How does the Marine Stewardship Council (MSC) develop its MSC Fisheries Standard and MSC Chain of Custody Standard?
2. How does the MSC collaborate with its members when developing its MSC Fisheries Standard and MSC Chain of Custody Standard?
3. Since 2021, how many safety complaints has the MSC received from regulators including the U.S. Food and Drug Administration? How were those complaints addressed?
4. Does the MSC have an internal process to review member practices in safe and responsible fishing practices?
  - a. What enforcement tools does the MSC have if a member is found to be in violation of its MSC Fisheries Standard and MSC Chain of Custody Standard?
  - b. Since 2021, how many enforcement actions have been taken by the MSC If a member is found to be in violation of its MSC Fisheries Standard and MSC Chain of Custody Standard, does the MSC report those violations to regulators?
