

AMENDMENT NO. 1

Calendar No. _____

Purpose: To coordinate Federal research and development efforts focused on modernizing mathematics in STEM education through mathematical and statistical modeling, including data-driven and computational thinking, problem, project, and performance-based learning and assessment, interdisciplinary exploration, and career connections, and for other purposes.

IN THE SENATE OF THE UNITED STATES—118th Cong., 1st Sess.

S. 3392

To reauthorize the Education Sciences Reform Act of 2002, the Educational Technical Assistance Act of 2002, and the National Assessment of Educational Progress Authorization Act, and for other purposes.

Referred to the Committee on _____ and
ordered to be printed

Ordered to lie on the table and to be printed

AMENDMENT intended to be proposed by Ms. HASSAN

Viz:

1 At the end of part F of title I, add the following:

2 **SEC. 181. MATHEMATICAL AND STATISTICAL MODELING**

3 **EDUCATION.**

4 (a) **SHORT TITLE.**—This section may be cited as the
5 “Mathematical and Statistical Modeling Education Act”.

6 (b) **MATHEMATICAL AND STATISTICAL MODELING**
7 **EDUCATION.**—

8 (1) **FINDINGS.**—Congress finds the following:

1 (A) The mathematics taught in schools, in-
2 cluding statistical problem solving and data
3 science, is not keeping pace with the rapidly
4 evolving needs of the public and private sector,
5 resulting in a STEM skills shortage and em-
6 ployers needing to expend resources to train
7 and upskill employees.

8 (B) According to the Bureau of Labor Sta-
9 tistics, the United States will need 1,000,000
10 additional STEM professionals than it is on
11 track to produce in the coming decade.

12 (C) The field of data science, which is rel-
13 evant in almost every workplace, relies on the
14 ability to work in teams and use computational
15 tools to do mathematical and statistical problem
16 solving.

17 (D) Many STEM occupations offer higher
18 wages, more opportunities for advancement,
19 and a higher degree of job security than non-
20 STEM jobs.

21 (E) The STEM workforce relies on com-
22 putational and data-driven discovery, decision-
23 making, and predictions, from models that
24 often must quantify uncertainty, as in weather

1 predictions, spread of disease, or financial fore-
2 casting.

3 (F) Most fields, including analytics,
4 science, economics, publishing, marketing, actu-
5 arial science, operations research, engineering,
6 and medicine, require data savvy, including the
7 ability to select reliable sources of data, identify
8 and remove errors in data, recognize and quan-
9 tify uncertainty in data, visualize and analyze
10 data, and use data to develop understanding or
11 make predictions.

12 (G) Rapidly emerging fields, such as artifi-
13 cial intelligence, machine learning, quantum
14 computing and quantum information, all rely on
15 mathematical and statistical concepts, which
16 are critical to prove under what circumstances
17 an algorithm or experiment will work and when
18 it will fail.

19 (H) Military academies have a long tradi-
20 tion in teaching mathematical modeling and
21 would benefit from the ability to recruit stu-
22 dents with this expertise from their other school
23 experiences.

24 (I) Mathematical modeling has been a
25 strong educational priority globally, especially

1 in China, where participation in United States
2 mathematical modeling challenges in high
3 school and higher education is orders of mag-
4 nitude higher than in the United States, and
5 Chinese teams are taking a majority of the
6 prizes.

7 (J) Girls participate in mathematical mod-
8 eling challenges at all levels at similar levels as
9 boys, while in traditional mathematical competi-
10 tions girls participate less and drop out at every
11 stage. Students cite opportunity for teamwork,
12 using mathematics and statistics in meaningful
13 contexts, ability to use computation, and em-
14 phasis on communication as reasons for contin-
15 ued participation in modeling challenges.

16 (2) DEFINITIONS.—In this subsection:

17 (A) DIRECTOR.—The term “Director”
18 means the Director of the National Science
19 Foundation.

20 (B) FEDERAL LABORATORY.—The term
21 “Federal laboratory” has the meaning given
22 such term in section 4 of the Stevenson-Wydler
23 Technology Innovation Act of 1980 (15 U.S.C.
24 3703).

1 (C) FOUNDATION.—The term “Founda-
2 tion” means the National Science Foundation.

3 (D) INSTITUTION OF HIGHER EDU-
4 CATION.—The term “institution of higher edu-
5 cation” has the meaning given such term in
6 section 101(a) of the Higher Education Act of
7 1965 (20 U.S.C. 1001(a)).

8 (E) MATHEMATICAL MODELING.—The
9 term “mathematical modeling” has the meaning
10 given the term in the 2019 Guidelines for As-
11 sessment and Instruction in Mathematical Mod-
12 eling Education (GAIMME) report, 2nd edition.

13 (F) OPERATIONS RESEARCH.—The term
14 “operations research” means the application of
15 scientific methods to the management and ad-
16 ministration of organized military, govern-
17 mental, commercial, and industrial processes to
18 maximize operational efficiency.

19 (G) STATISTICAL MODELING.—The term
20 “statistical modeling” has the meaning given
21 the term in the 2021 Guidelines for Assessment
22 and Instruction in Statistical Education II
23 (GAISE II) report.

1 (H) STEM.—The term “STEM” means the
2 academic and professional disciplines of science,
3 technology, engineering, and mathematics.

4 (3) PREPARING EDUCATORS TO ENGAGE STU-
5 DENTS IN MATHEMATICAL AND STATISTICAL MOD-
6 ELING.—The Director shall provide grants on a
7 merit-reviewed, competitive basis to institutions of
8 higher education and nonprofit organizations (or a
9 consortium thereof) for research and development to
10 advance innovative approaches to support and sus-
11 tain high-quality mathematical modeling education
12 in schools operated by local educational agencies, in-
13 cluding statistical problem solving, data science, op-
14 erations research, and computational thinking. The
15 Director shall encourage applicants to form partner-
16 ships to address critical transitions, such as middle
17 school to high school, high school to postsecondary
18 education, and school to internships and jobs.

19 (4) APPLICATION.—An entity seeking a grant
20 under paragraph (3) shall submit an application at
21 such time, in such manner, and containing such in-
22 formation as the Director may require. The applica-
23 tion shall include the following:

24 (A) A description of the target population
25 to be served by the research activity for which

1 such grant is sought, including student sub-
2 groups described in section 1111(b)(2)(B)(xi) of
3 the Elementary and Secondary Education Act
4 of 1965 (20 U.S.C. 6311(b)(2)(B)(xi)), and
5 students experiencing homelessness and chil-
6 dren and youth in foster care.

7 (B) A description of the process for re-
8 cruitment and selection of students, educators,
9 or local educational agencies to participate in
10 such research activity.

11 (C) A description of how such research ac-
12 tivity may inform efforts to promote the en-
13 gagement and achievement of students in pre-
14 kindergarten through grade 12 in mathematical
15 modeling and statistical modeling using prob-
16 lem-based learning with contextualized data and
17 computational tools.

18 (D) In the case of a proposal consisting of
19 a partnership or partnerships with 1 or more
20 local educational agencies and 1 or more re-
21 searchers, a plan for establishing a sustained
22 partnership that is jointly developed and man-
23 aged, draws from the capacities of each partner,
24 and is mutually beneficial.

1 (5) PARTNERSHIPS.—In awarding grants under
2 paragraph (3), the Director shall encourage applica-
3 tions that include—

4 (A) partnership with a nonprofit organiza-
5 tion or an institution of higher education that
6 has extensive experience and expertise in in-
7 creasing the participation of students in pre-
8 kindergarten through grade 12 in mathematical
9 modeling and statistical modeling;

10 (B) partnership with a local educational
11 agency, consortium of local educational agen-
12 cies, or Tribal educational agencies;

13 (C) an assurance from school leaders to
14 making reforms and activities proposed by the
15 applicant a priority;

16 (D) ways to address critical transitions,
17 such as middle school to high school, high
18 school to postsecondary education, and school to
19 internships and jobs;

20 (E) input from education researchers and
21 cognitive scientists, as well as practitioners in
22 research and industry, so that what is being
23 taught is up-to-date in terms of content and
24 pedagogy;

1 (F) a communications strategy for early
2 conversations with parents, school leaders,
3 school boards, community members, employers,
4 and other stakeholders; and

5 (G) resources for parents, school leaders,
6 school boards, community members, and other
7 stakeholders to build skills in modeling and
8 analytics.

9 (6) USE OF FUNDS.—An entity that receives a
10 grant under this subsection shall use the grant
11 funds for research and development activities to ad-
12 vance innovative approaches to support and sustain
13 high-quality mathematical modeling education in
14 public schools, including statistical modeling, data
15 science, operations research, and computational
16 thinking, which may include—

17 (A) engaging prekindergarten through
18 grade 12 educators in professional learning op-
19 portunities to enhance mathematical modeling
20 and statistical problem solving knowledge, and
21 developing training and best practices to pro-
22 vide more interdisciplinary learning opportuni-
23 ties;

24 (B) conducting research on curricula and
25 teaching practices that empower students to

1 choose the mathematical, statistical, computa-
2 tional, and technological tools that they will
3 apply to a problem, as is required in life and
4 the workplace, rather than prescribing a par-
5 ticular approach or method;

6 (C) providing students with opportunities
7 to explore and analyze real data sets from con-
8 texts that are meaningful to the students, which
9 may include—

10 (i) missing or incorrect values;

11 (ii) quantities of data that require
12 choice and use of appropriate technology;

13 (iii) multiple data sets that require
14 choices about which data are relevant to
15 the current problem; and

16 (iv) data of various types including
17 quantities, words, and images;

18 (D) taking a school or district-wide ap-
19 proach to professional development in mathe-
20 matical modeling and statistical modeling;

21 (E) engaging rural local educational agen-
22 cies;

23 (F) supporting research on effective math-
24 ematical modeling and statistical modeling
25 teaching practices, including problem- and

1 project-based learning, universal design for ac-
2 cessibility, and rubrics and mastery-based grad-
3 ing practices to assess student performance;

4 (G) designing and developing pre-service
5 and in-service training resources to assist edu-
6 cators in adopting transdisciplinary teaching
7 practices within mathematics and statistics
8 courses;

9 (H) coordinating with local partners to
10 adapt mathematics and statistics teaching prac-
11 tices to leverage local natural, business, indus-
12 try, and community assets in order to support
13 community-based learning;

14 (I) providing hands-on training and re-
15 search opportunities for mathematics and sta-
16 tistics educators at Federal laboratories or in-
17 stitutions of higher education, or in industry;

18 (J) developing mechanisms for partner-
19 ships between educators and employers to help
20 educators and students make connections be-
21 tween their mathematics and statistics projects
22 and topics of relevance in today's world;

23 (K) designing and implementing profes-
24 sional development courses and experiences, in-

1 cluding mentoring for educators, that combine
2 face-to-face and online experiences;

3 (L) addressing critical transitions, such as
4 middle school to high school, high school to
5 postsecondary education, and school to intern-
6 ships and jobs; and

7 (M) any other activity the Director deter-
8 mines will accomplish the goals of this sub-
9 section.

10 (7) EVALUATIONS.—All proposals for grants
11 under this subsection shall include an evaluation
12 plan that includes the use of outcome-oriented meas-
13 ures to assess the impact and efficacy of the grant.
14 Each recipient of a grant under this subsection shall
15 include results from these evaluative activities in an-
16 nual and final project reports.

17 (8) ACCOUNTABILITY AND DISSEMINATION.—

18 (A) EVALUATION REQUIRED.—The Direc-
19 tor shall evaluate the portfolio of grants award-
20 ed under this subsection. Such evaluation
21 shall—

22 (i) use a common set of benchmarks
23 and tools to assess the results of research
24 conducted under such grants and identify
25 best practices; and

1 (ii) to the extent practicable, integrate
2 the findings of research resulting from the
3 activities funded through such grants with
4 the findings of other research on student's
5 pursuit of degrees or careers in STEM.

6 (B) REPORT ON EVALUATIONS.—Not later
7 than 180 days after the completion of the eval-
8 uation under subparagraph (A), the Director
9 shall submit to Congress and make widely avail-
10 able to the public a report that includes—

11 (i) the results of the evaluation; and
12 (ii) any recommendations for adminis-
13 trative and legislative action that could op-
14 timize the effectiveness of the grants
15 awarded under this subsection.

16 (9) AUTHORIZATION OF APPROPRIATIONS.—For
17 each of fiscal years 2024 through 2028, there are
18 authorized out of funds appropriated to the National
19 Science Foundation, \$10,000,000 to carry out the
20 activities under this subsection.

21 (c) NASEM REPORT ON MATHEMATICAL AND STA-
22 TISTICAL MODELING EDUCATION IN PREKINDERGARTEN
23 THROUGH GRADE 12.—

24 (1) STUDY.—Not later than 180 days after the
25 date of enactment of this Act, the Director shall

1 seek to enter into an agreement with the National
2 Academies of Sciences, Engineering and Medicine
3 (in this subsection referred to as “NASEM”) (or if
4 NASEM declines to enter into such an agreement,
5 another appropriate entity) under which NASEM, or
6 such other appropriate entity, agrees to conduct a
7 study on the following:

8 (A) Factors that enhance, or barriers to,
9 the implementation of mathematical modeling
10 and statistical modeling in elementary and sec-
11 ondary education, including opportunities for,
12 and barriers to, use modeling to integrate
13 mathematical and statistical ideas across the
14 curriculum, including the following:

15 (i) Pathways in mathematical mod-
16 eling and statistical problem solving from
17 kindergarten to the workplace so that stu-
18 dents are able to identify opportunities to
19 use their school mathematics and statistics
20 in a variety of jobs and life situations and
21 so that employers can benefit from stu-
22 dents’ school learning of data science, com-
23 putational thinking, mathematics, statis-
24 tics, and related subjects.

1 (ii) The role of community-based
2 problems, service-based learning, and in-
3 ternships for connecting students with ca-
4 reer preparatory experiences.

5 (iii) Best practices in problem-,
6 project-, and performance-based learning
7 and assessment.

8 (B) Characteristics of teacher education
9 programs that successfully prepare teachers to
10 engage students in mathematical modeling and
11 statistical modeling, as well as gaps and sugges-
12 tions for building capacity in the pre-service
13 and in-service teacher workforce.

14 (C) Mechanisms for communication with
15 stakeholders, including parents, administrators,
16 and the public, to promote understanding and
17 knowledge of the value of mathematical mod-
18 eling and statistical modeling in education.

19 (2) PUBLIC STAKEHOLDER MEETING.—In the
20 course of completing the study described in para-
21 graph (1), NASEM or such other appropriate entity
22 shall hold not less than one public meeting to obtain
23 stakeholder input on the topics of such study.

24 (3) REPORT.—The agreement under paragraph
25 (1) shall require NASEM, or such other appropriate

1 entity, not later than 24 months after the effective
2 date of such agreement, to submit to the Secretary
3 of Education and the appropriate committees of ju-
4 risdiction of Congress a report containing—

5 (A) the results of the study conducted
6 under paragraph (1);

7 (B) recommendations to modernize the
8 processes described in paragraph (1)(A); and

9 (C) recommendations for such legislative
10 and administrative action as NASEM, or such
11 other appropriate entity, determines appro-
12 priate.

13 (4) AUTHORIZATION OF APPROPRIATIONS.—For
14 fiscal year 2024, there are authorized out of funds
15 appropriated to the National Science Foundation,
16 \$1,000,000 to carry out the activities under this
17 subsection.
